EDUCATION

MIT University

Bachelor of Software Engineering (Honours)

Expected Graduation: 2027

SKILLS

Programming Languages	Java; JavaScript; C; C++; Python; Swift
Backend Development	Spring Boot; REST APIs; Spring Security; JWT Authentication; OAuth2
Frontend	React; Next.js
Databases & Messaging	MongoDB; PostgreSQL; Redis; Kafka
Software Architecture	N-Tier Architecture; Modular Monolith; C4 Model; Design Patterns
Cloud & DevOps	Docker; VPS Deployment; Railway; Vercel; DigitalOcean; AWS Elastic Beanstalk; Amazon ECR; Cloudflare Pages; Cloudflare Tunnel
CMS & WordPress	Custom WordPress Themes; WP Mail SMTP; LiteSpeed Cache; Rank Math SEO; Polylang
Tools & Practices	Git/GitHub; Linux; Postman; Swagger; JUnit 5; Jira; Technical Documentation

EXPERIENCE

Vision-Guard — AI-Based Die Defect Detection

Feb 2025–Aug 2025

AI Integration Contributor / Contract Capstone Project at Intel Vietnam

- Collaborated with Intel supervisors and a 5-member capstone team to develop an AI-assisted semiconductor defect inspection prototype.
- Created and annotated datasets for multi-class defect detection and defined inspection taxonomy for model training.
- Trained and evaluated computer vision models using Intel® Geti™, achieving reliable defect classification performance for feasibility assessment.
- Integrated computer vision inference workflows into a React/Python application using the Intel Geti SDK, enabling end-to-end defect inspection demonstrations.
- Showcase: rmitvn-showcase.com/uiia

UNIVERSITY PROJECTS

DEVision — Job Application Web Platform

Nov 2025–Jan 2026

Back-end Developer / System Architecture Design Course

- Collaborated with a 5-member Agile team to design and develop a job application platform.
- Designed a modular monolith architecture with data models, C4 diagrams, and software design patterns to define subsystem boundaries and backend responsibilities.
- Built 47 Spring Boot REST APIs using MongoDB for authentication, profiles, job applications, notifications, subscriptions, and administration.
- Integrated Redis caching and Kafka event-driven messaging to improve subsystem responsiveness and decouple application workflows.
- Configured Spring Boot security with JWT authentication, Google OAuth support, and Resend email service integration.
- Configured GitHub Actions workflows for automated builds and JUnit 5 test execution.
- Repository: github.com/ISYS3461-2025C-SonTinh-DEVision/JobApplicant.git

Son Tra Retreat — WordPress Business Website

May 2026–Jun 2026

WordPress Developer

- Designed, developed, and deployed a production hospitality website using a predominantly custom WordPress theme built with PHP, HTML, CSS, and JavaScript.
- Configured and maintained VPS hosting, domain routing, SSL certificates, and deployment workflows to ensure reliable public access.
- Implemented a reservation workflow using WP Mail SMTP, enabling customers to submit booking requests through email-based communication.
- Built responsive UI components and CMS workflows that enabled non-technical staff to independently manage business pages, galleries, and blog content.
- Optimized website performance, SEO, and multilingual accessibility using LiteSpeed Cache, Rank Math SEO, Polylang, and map integration.
- Live Website: sontraretreat.vn
